EduNest

Multi-Vendor School Management SaaS Platform Documentation

A complete visual guide to every page, by role.

About this platform

EduNest is a multi-tenant “Shopify for Schools” platform: any school signs up as an isolated tenant with its own subdomain and data. This document walks through every screen in the product, grouped by the role that uses it — the public marketing site, the Super Admin (platform owner) console, and the in-school roles: School Admin, Teacher, Student and Parent.

Role	What they do
Public	Marketing site, pricing, leaderboards, contact enquiries, sign-in.
Super Admin	Platform owner: manage every school, contact leads, plans; enter any school to support it.
School Admin	Runs one school: teachers, students, classrooms, fees, exams, attendance, certificates, devices.
Teacher	Own classrooms, assignments, marks entry, ratings received.
Student	Classrooms, assignments, results, fees, rate teachers.
Parent	A child's attendance, results and fees.

Security note

Every tenant's data is strictly isolated: a scoped ORM manager, list filters and form validation, plus middleware that pins each employee to their own school, ensure a user from one school can never read or modify another school's data.
